Floor Systems

Access floor / parquet

A wooden floor creates a comfortable atmosphere in rooms where people work or live and is pleasant to walk on. The renewable resource wood has a balancing effect on the humidity of the ambient air. Nowadays, parquet can be applied on MERO access floor systems without any problem.

Advantages

of the MERO access floor finished parquet with edge protection :

- better moisture proof due to protected edges
- higher dimensional accuracy for jointless appearance
- good value for money as parquet is glued directly on the floor panels without interlayers
- on-time delivery, as MERO-TSK applies the parquet at factory

The surface of all parquet floor panels are coated with UV cured solvent-free acrylic lacquer or UV oiled. On request, other wood types are available for strip and lamella parquet. Parquet can also be made and applied in special designs.

Finished parquet on access floor can be delivered as follows:

Strip parquet in three standard designs, type nature

- Maple American or European
- Beech steamed or nature
- Oak
- Ash

Lamella parquet in following wood types:

- Maple royal or colored
- Beech steamed
- Oak
- Ash
- Birch

Bamboo parquet:

- Bamboo nature (light)
- Bamboo caramel

Oak nature

Oak steamed
