Typ VK13

(1)

Individuality for all cases. The ingenious combination of high stability, absolute water resistance, problem-free cleaning and sophisticated design means that Schäfer type VK13

(2)

cubicle system in 13 mm solid grade laminate panels are suitable for all areas of use. The system matches the cloakroom lockers of type GVK13 in material, colour and shape, together forming an optical unit that gives every locker room a very special appearance. Regardless of whether toilet, shower or changing room, the Schäfer VK13 cubicle

system leaves enough options open for individual space and colour design.

(1) Cubicle system type VK13 in a row. The vertical profiles not only result in an extremely stable construction, but are additionally drilled to the head rail to form a continuous link to the floor. The result is a highly robust and long-lasting cubicle system. The double-coloured cubicle on the picture helps the visitor to orient himself.

(2) Schäfer cubicle system type VK13 is, with its many types of variants, the ideal type for Kindergartens. Individual combinations of colours, water-resistance, unusual possibilities of design and a high level of safety and durability are more of the advantages of this cubicle system. Ask for the brochure of our cubicles for children, too.

(3) Shower system type VK, also combinable with curtains, swinging doors, splashbacks and many other outfitting options.

(4) The height-adjustable support foot with collar is made entirely of stainless steel and complies with DIN 1.4301.

(5) Height-adjustable foot made of anodised aluminium (E6/EV1). This variant is used with the anodised profiles.

(6) Wall-mounted privacy screen fixed in place by stable anodised round aluminium plates.

(7) Sliding door solutions for handicapped and family cubicles are integrated into the overall concept.

Floating walls. Cubicle system VK13 JUMP catches with its floating optics. The recessed feed give a very special optics to this cubicle type. Not far from standard but a highly exclusive cubicle system.

(1) Dividing wall with recessed foot, completely made of anodised aluminium. Big front elements are stabilised with an additional aluminium bracket which is screwed on the dividing wall. Side walls get additional stabilising brackets at the wall connection, too.

(2) Silver-coloured plastic knob on the outside of the cubicle with free/occupied display. A hex socket is built in for opening the door in an emergency.

(3) Quick-lock closure system made of silver-coloured plastic with stainless steel bar and anodised aluminium lock plate that gives the lock area extra strength and effectively prevents it coming loose.

(4) Aluminium knob on the outside of the cubicle with free/occupied display. A hex socket is built in for opening the door in an emergency.

(5) Quick-lock closure system made of anodised aluminium with stainless steel bar and anodised aluminium lock plate that gives the lock area extra strength and effectively prevents it coming loose. The locking wheel is extremely easy to use, making it highly suitable for children, the elderly or disabled.

(6) Stainless steel knob with vacant/occupied display on the outside of the cubicle. For emergency opening a hexagon socket is integrated.

(7) High-quality stainless steel door knob with reinforcing lock plate also out of stainless steel.

(8) Two interwoven aluminium profiles on the hinge side form a highly effective and durable finger anti-trap protection with integrated self-closing function.

(9) Stainless steel rising strip with high-efficiency polymer inserts. These inserts ensure that maintenance is never needed and that the doors close silently. The parts never wear out or show signs of fatigue, ensuring that the doors still close perfectly even after years of use. Stainless steel tapping screws are used to screw stainless steel strips to a plate equipped with tapping holes. It is a fastening method that has proven itself for more than 20 years, giving lasting stability and protection against vandalism.

TÜV tested safety stands for highest quality

(1)

Footless, beautiful and functional. Schäfer's VKH13 cubicle system stands out thanks to its ease of cleaning. The hanging construction makes supporting feet unnecessary to a great extent. It is a good alternative for a high quality system combined with extreme user-friendliness.

TÜV tested safety stands for
highest quality

(1)

(1) Cubicle system type VKH13 as changing cubicles with glass doors. This is one of many possibilities to upgrade the optics of the cubicle system. Necessary supporting stands are made of square pipes. An optical highlight and a highly durable solution.

(2) Cubicles system type VKH13 between walls. Up to a length of 5 meters you do not need feet when there are stable brick walls.

(3) Privacy screens made from enamelled SCHÄFER single pane safety glass (ESG-H) are also deliverable. Fixing is done by 4 anodised aluminium brackets. A high-quality alternative.
