Safety, stability, modern design. The Schäfer S20 cloakroom system combines safety requirements in the changing area with robust stability under heavy loads and appealing design for attractive layout in various situations. This makes it perfectly suited for all areas of application, such as swimming pools, sports halls, schools and commercial changing areas. The simple, systematic method of construction means that it can be adapted to suit almost all structural requirements.

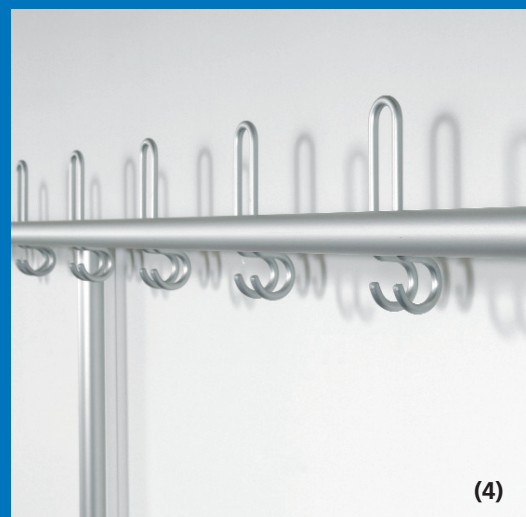

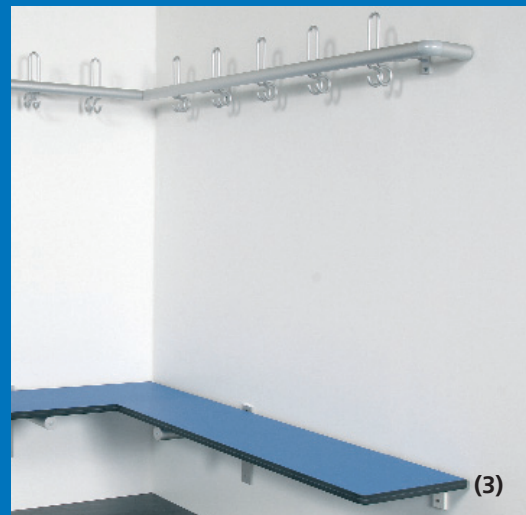

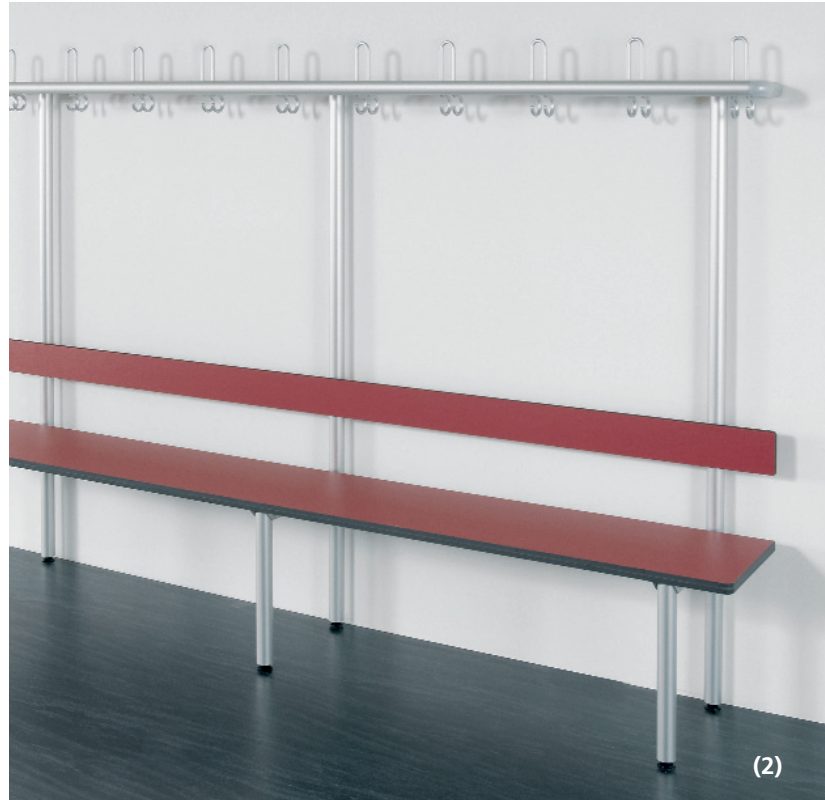

(1) Double-sided bench with a rail carrying cloakroom hooks running round the top. The underframe of the bench can be supplied either powder-coated or anodised, as required.

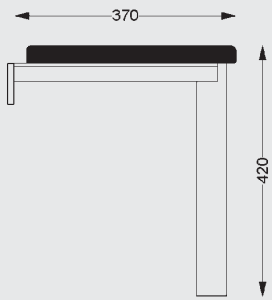

(2) Single-sided bench with a rail carrying cloakroom hooks. Bench made of 20 mm TRESPA solid-core panels, seat back made of 13 mm TRESPA solid-core panels, available up to a length of 2500 mm without joints. Rounded corners and edges that are comfortable to the touch, insure a high degree of accident prevention.

Alternatively, the bench tops can be supplied made out of 13 mm TRESPA solid-core shelves, doubled up to 26 mm, as shown here.

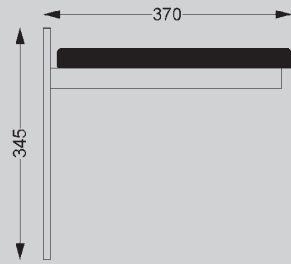

(3) Wall-hung bench with wall-hung hook rail. This is a very easy to clean solution but it requires a high stability and bearing strength of the brickwork.

(4) Cloakroom hook rail made of round aluminium tubing, with triple safety hooks. The hooks are fixed behind the rail, so that no parts are overhanging and the danger of hurts is minimized.
